## DETAILED ACTION

- 1. Claim 152 is allowed for the reasons of record.
- 2. Claim 154 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 145-151, 153, 155, 157-166 are rejected under 35 U.S.C. 103(a) as being unpatentable over Osborn, III et al. (U.S. 5,647,862) in view of Meirowitz et al. (WO 9604876A1).

Osborn '862 teaches the use of an absorbent strip to transport liquid to places where it can penetrate a fluid directing strip (which is at least partially impermeable or

Application/Control Number: 09/442,685

Page 3

Art Unit: 1772

resistant to liquid) and be absorbed into an absorbent layer The absorbent strip may comprise capillary channel (abstract). fibers (col. 9, lines 1-2). Meirowitz et al. teaches the use of a bundle of parallel fibers with an inter fiber capillary spacing of about 200 microns (page 7, lines 15-25). The instant invention claims use of a capillary system to distribute liquid and a resistance layer under the distribution layer with a fiber bundle with an intercapillary spacing of 50 to 400 microns. would have been obvious to one of ordinary skill of the art to have used the bundle of Meirowitz et al. as the absorbent directional strip of Osborn in order to better transport fluids in a direction because of the teachings of Meirowitz et al. It would further have been obvious to orient the fluid direction layer and perforate it at desired locations in order to direct fluid to particular locations in a given absorbent application. Regarding claim 153, capillary channel fiber bundles should have a high rate of fluid transfer per unit weight of fiber.

5. Applicant's arguments with respect to claims 145-151, 153, 155, 157-166 have been considered but are moot in view of the new ground(s) of rejection. The previous art rejection is withdrawn in view of applicant's arguments.

Art Unit: 1772

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Watkins III whose telephone number is 703-308-2420. The examiner works an increased flex time schedule, but can normally be reached Monday through Friday, 11:30 A.M. through 8:00 P.M. Eastern Time. The examiner returns all calls within one business day unless an extended absence is noted on his voice mail greeting.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Harold Pyon can be reached on 703-308-4251. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9310 for regular communications and 703-872-9311 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0651.
